

# Worksheet.GetColumnProperties(Int32)

## Description

Returns a [ColumnProperties](#) object representing the column specified by index.

**C#**

```
public ColumnProperties GetColumnProperties(int columnIndex)
```

**vb.net**

```
Public Function GetColumnProperties(ByVal columnIndex As Integer) As ColumnProperties
```

## Parameters

***columnIndex***

The 0-based index of the column.

## Returns

A [ColumnProperties](#) object representing the specified column.

## Examples

**C#**

```
ColumnProperties colProps = ws.GetColumnProperties(0);
```

**vb.net**

```
Dim colProps As ColumnProperties = ws.GetColumnProperties(0)
```
