

# Document.SaveDataInFormField

## Description

Sets or returns a `boolean` representing if Word will save only the data entered into a form field (instead of the field itself) for this document. When this is set to `true`, Word saves the data entered into an online form as a single, tab-delimited record so you can use it in a database. Word saves the file in Text Only file format.

### C#

```
public boolean SaveDataInFormField{ get; set; }
```

### vb.net

```
Public Property SaveDataInFormField() As Boolean
```

## Remarks

The default value for a new [Document](#) is `false`.

MS Word equivalent: Tools menu > Options... > Save tab > Save options section > Save data only for forms

## Examples

### C#

```
//--- Return SaveDataInFormField
bool vSaveData = oDocument.SaveDataInFormField;

//--- Set SaveDataInFormField
oDocument.PrintDataInFormFields = true;
```

### vb.net

```
'--- Return SaveDataInFormField
Dim vSaveData As Boolean = oDocument.SaveDataInFormField

'--- Set PrintDataInFormFields
oDocument.SaveDataInFormField = True
```
