Table.MergeCells(Int32, Int32, Int32, Int32)

Description

Merges the specified set of cells into a single cell.

C#

```csharp
public void MergeCells(int firstRow, int firstCol, int numRows, int numCols)
```

vb.net

```vbnet
Public Sub MergeCells(ByVal firstRow As Integer, ByVal firstCol As Integer, ByVal numRows As Integer, ByVal numCols As Integer)
```

Parameters

firstRow

The 0-based number of the first row in the set of cells to merge.

firstCol

The 0-based number of the first column in the set of cells to merge.

numRows

The number of rows to merge.

numCols

The number of columns to merge.

Examples

C#

```csharp
table.MergeCells(3, 2, 4, 1);
```

vb.net

```vbnet
table.MergeCells(3, 2, 4, 1)
```
