

Table.SetPreferredColumnWidth(Int32, Int32)

Description

Sets an `int` representing the width of a particular column. In order to set the width of a column, you must first set the [PreferredColumnWidthUnit](#) of that column.

C#

```
public void SetPreferredColumnWidth(int column, int width)
```

vb.net

```
Public Sub SetPreferredColumnWidth(ByVal column As Integer, ByVal width As Integer)
```

Parameters

column

An `int` representing the index of the column for which to change the width.

width

An `int` representing the column's new width in twips. One twip = (1/20 pt) or (1/1440 in).

Remarks

MS Word equivalent: Table menu > Table properties... > Column tab > Size section > Column #: > Preferred width:

Examples

C#

```
//--- Set the width of the 3rd column to 1 inch
oTable.SetPreferredColumnWidthUnits(2, TableCell.WidthUnits.Twips);
oTable.SetPreferredColumnWidth(2, 1440);
```

vb.net

```
'--- Set the width of the 3rd column to 1 inch  
oTable.SetPreferredColumnWidthUnits(2, TableCell.WidthUnits.Twips)  
oTable.SetPreferredColumnWidth(2, 1440)
```
