ListLevel.BulletText

Description

Sets the bullet text that will be displayed at the current list level. It uses a pattern. If the text is ASCII codes 0-8, this represents the position of the list entry number for a particular level. A list is at a maximum nine levels deep. For example, in an outline you will have numbering that changes with the level such as 1.1, 1.1.2, and so on.

```
C#
public System.String BulletText{ set; }
```

```
vb.net
Public WriteOnly Property BulletText() As String
```

Examples

```
C#
//--- Set the 3rd list level to 1.2
    level.BulletText = "\u00001.\u00002";
```

```
vb.net
'--- Set the 3rd list level to 1.2
    level.BulletText = "\u00001.\u00002"
```
