

# SSRS Integration

## What is SSRS Integration?

OfficeWriter Reporting Services Integration enhances [Microsoft SQL Server Reporting Services](#) by allowing users to design and deliver their reports in native Word and Excel. Reporting Service Integration consists of two components:

### The OfficeWriter Renderer

The OfficeWriter renderer runs on the Reporting Services server.

The renderer takes a template RDL file that was designed using the OfficeWriter Designer, and populates it with data supplied by Reporting Services.

### The OfficeWriter Designer

The OfficeWriter Designer is a toolbar add-in for Microsoft Excel and Word.

With the OfficeWriter Designer, you design a report in Word or Excel. Any formula, charts, or other advanced Office functionality will be present in the output file when the report is run.

# Getting started with SSRS Integration

## Topics

---

- How OfficeWriter SSRS Integration works
- Workflow for building SSRS Reports
- OfficeWriter Designer vs OfficeWriter Designer .NET

## Creating Your First Report

---

- Create an Excel Report from an Existing RDL
- Create a Word Report From an Existing RDL

## Server Side Renderer Configuration

---

- How to define custom names for Reporting Services export options
- Setting global ExcelTemplate and WordTemplate properties in Reporting Services
- Activating Post-Processing ExcelApplication Features in SSRS
