

Designer .NET Excel - Publish Report

The **Publish Report** dialog appears when you click *OfficeWriter Designer .NET > Save > Deploy to server*. This action submits the report file to the SQL Server Reporting Services (SSRS) report server where the SSRS reports are stored.

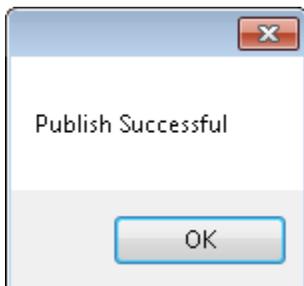

To publish your report:

1. From the OfficeWriter Designer .NET toolbar, click **Save** and select *Deploy to Remote Server*.
2. In the **domain or server URL** field, enter the path to your SSRS report server. For example, <http://MyReportServer/ReportServer>. Click **R**efresh or hit *Enter* to connect to the report server.

If you have already connected to your report server, the address should be available in the drop-down menu. The address bar will automatically populate with the report server that was last connected to.

3. Navigate to the destination folder for your report.
4. In the **Report Name** field, enter a name for your report.
5. Click **OK**. If a report with the same name was already published on the server, you will be asked to overwrite it.
6. When the report is published, you will receive a message box telling you that the publish was successful.

By default, the file format of the report will be .xlsx. If you wish to change the file format, [save the report](#) to disk before publishing.
