

NamedStyle.BuiltInStyleName

Description

Returns a [NamedStyle.BuiltIn](#) object that represents the culture-independent name of this style. This is only useful for built-in styles that come with Word. Any custom styles will return [UserDefined](#).

C#

```
public BuiltIn BuiltInStyleName{ get; }
```

vb.net

```
Public ReadOnly Property BuiltInStyleName() As BuiltIn
```

Examples

C#

```
NamedStyle.BuiltIn builtInStyle = namedStyl.BuiltInStyleName;
```

vb.net

```
Dim builtInStyle As NamedStyle.BuiltIn = namedStyl.BuiltInStyleName
```
