

DocumentProperties.GetCustomProperty(String)

Description

Returns an Object that represents the value of the custom property specified.

C#

```
public System.Object GetCustomProperty(System.String key)
```

vb.net

```
Public Function GetCustomProperty(ByVal key As String) As Object
```

Parameters

key

The name of the property to retrieve.

Returns

An Object that represents the value of the custom property specified.

Remarks

MS Word equivalent: File menu > Properties > Custom tab > Properties:

Examples

C#

```
//--- Return "Priority" Custom Property  
string priority = docProps.GetCustomProperty("Priority");
```

vb.net

```
'--- Return "Priority" Custom Property  
Dim priority As String = docProps.GetCustomProperty("Priority")
```
