

DocumentProperties.GetProperty(String)

Description

Returns an Object that represents the value of the property specified.

C#

```
public System.Object GetProperty(System.String propertyName)
```

vb.net

```
Public Function GetProperty(ByVal propertyName As String) As Object
```

Parameters

propertyName

A String representing the name of the property to retrieve.

Returns

An Object that represents the value of the property specified.

Remarks

MS Word equivalent: File menu > Properties > Custom tab > Properties:

Examples

C#

```
//--- Return "Priority" Property  
string priority = docProps.GetProperty("Priority");
```

vb.net

```
'--- Return "Priority" Property  
Dim priority As String = docProps.GetProperty("Priority")
```
