

# ParagraphFormatting.SetIndent(Int32, ParagraphFormatting.IndentLocation)

## Description

Sets an `int` representing the indent of the paragraph in twips.

### C#

```
public void SetIndent(int twips, IndentLocation location)
```

### vb.net

```
Public Sub SetIndent(ByVal twips As Integer, ByVal location As IndentLocation)
```

## Parameters

### *indentSize*

An `int` representing the size in twips by which to indent.

### *indentLocation*

A [ParagraphFormatting.IndentLocation](#) representing the indent location for which to set the indent.

## Examples

### C#

```
oParagraphFormatting.SetIndent(8, ParagraphFormatting.IndentLocation.FirstLine);
```

### vb.net

```
oParagraphFormatting.SetIndent(8, ParagraphFormatting.IndentLocation.FirstLine)
```
