

Legend

Description

A `Legend` object represents a chart's legend. To return `Legend` object, use `Chart.Legend`.

C#

```
public sealed class Legend : ChartRegion
```

vb.net

```
Public NotInheritable Class Legend  
Inherits ChartRegion
```

Properties

| Name | Description |
|--------------------------|---|
| Location | Sets or returns how the legend will be positioned in relation to the chart's plot area. |
| Vertical | Sets or returns whether the legend will be displayed vertically. |
| Visible | Sets or returns whether the chart legend will be displayed. |

Nested Classes

| Name | Description |
|--------------------------------|---|
| LegendLocation | The LegendLocation class contains all available legend positions relative to a chart's plot area. |
