

# HeaderFooterSection

Introduced in build 4.5.1

## Description

The [HeaderFooterSection](#) class represents an area of the header or footer. It allows you to set and retrieve the content in that area.

**C#**

```
public class HeaderFooterSection
```

**vb.net**

```
Public Class HeaderFooterSection
```

## Remarks

To retrieve a [HeaderFooterSection](#) object, call one of the following methods:

[PageSetup.GetHeader\(section\)](#)

[PageSetup.GetFooter\(section\)](#)

## Methods

Name	Description
<a href="#">GetPicture()</a>	Returns the <a href="#">HeaderFooterPicture</a> that has been embedded in this section of the spreadsheet's header or footer, or null if there is no picture.
<a href="#">GetText()</a>	Returns the text that is contained in this section of the header or footer, including formatting codes
<a href="#">SetContent(String)</a>	Sets the text that will appear in this section of the header or footer
<a href="#">SetContent(String, String)</a>	Sets the text that will appear in this section of the header or footer and adds a picture
<a href="#">SetContent(String, System.IO.Stream)</a>	Sets the text that will appear in this section of the header or footer and adds a picture

## Nested Classes

Name	Description
<a href="#">Section</a>	A <a href="#">Section</a> value specifies a section of the header or footer.
