

PivotTable

Introduced in build 8.4

Description

A `PivotTable` object represents a `PivotTable` in a worksheet and allows the `PivotTable` to be managed.

C#

```
public sealed class PivotTable
```

vb.net

```
Public NotInheritable Class PivotTable
```

Remarks

To create a `PivotTable` object, call `PivotTables.CreatePivotTable(Area, Int32, Int32)`.

Properties

Name	Description
<code>ChangeDataSource(Area)</code>	Changes the data source of the <code>PivotTable</code> to a new <code>Area</code> .
<code>ColumnLabels</code>	Returns a <code>FieldCollection</code> object representing a list of column labels in a <code>PivotTable</code> . The items in the collection are <code>PivotTableFields</code> of type <code>ColumnLabel</code> .
<code>DataFields</code>	Returns a <code>FieldCollection</code> object representing a list of data fields (a.k.a value fields) in a <code>PivotTable</code> . The items in the collection are <code>PivotTableFields</code> of type <code>DataField</code> .
<code>Name</code>	Sets or returns the name of the <code>PivotTable</code> .
<code>PageFields</code>	Returns a <code>FieldCollection</code> object representing a list of page fields in a <code>PivotTable</code> . The items in the collection are <code>PivotTableFields</code> of type <code>PageField</code> .
<code>PivotTableLayout</code>	Returns a <code>PivotTableLayout</code> object representing the layout of a <code>PivotTable</code> .
<code>PivotTableSettings</code>	Returns a <code>PivotTableSettings</code> object representing the properties of a <code>PivotTable</code> .
<code>RowLabels</code>	Returns a <code>FieldCollection</code> object representing a list of row labels in a <code>PivotTable</code> . The items in the collection are <code>PivotTableFields</code> of type <code>RowLabel</code> .
<code>SourceFields</code>	Returns a <code>SourceFieldCollection</code> .
