

Trendline.TrendlineLabel

Description

Returns a [ChartText](#) object representing a trendline label.

C#

```
public ChartText TrendlineLabel{ get; }
```

vb.net

```
Public ReadOnly Property TrendlineLabel() As ChartText
```

Remarks

The contents of the Trendline label are generally controlled through the [Trendline.ShowEquation](#) and [Trendline.ShowRSquaredValue](#) values. The default text can be overridden in .xlsx with the [ChartText.Text](#) property in the TrendlineLabel object. Starting in **OfficeWriter 8.7** you can override the text in .xls files as well. You can also use this property to manipulate the formatting of the label.
