

FunctionValue.FunctionValue(Double)

Description

Creates a new [FunctionValue](#) object setting the [Value](#) property to the [Double](#) passed in to the constructor and setting the [Type](#) property to [FunctionValueType.NUMBER](#).

C#

```
public FunctionValue(double number)
```

vb.net

```
Public Sub New FunctionValue(number As Double)
```

Examples

C#

```
FunctionValue myValue = new FunctionValue(3.5d);
```

vb.net

```
Dim myValue As New FunctionValue(3.5d)
```
