

Style.Font

Description

Sets or returns the [Font](#) object that defines the font for this style.

C#

```
<p> public Font Font{ get; set; }</p>
```

vb.net

```
<p>Public Property Font() As Font</p>
```

Examples

C#

```
//--- Get Font
    Font fnt = styl.Font;

    //--- Set Font
    styl.Font = fnt;
```

vb.net

```
'--- Get Font
    Dim fnt As Font = styl.Font

    '--- Set Font
    styl.Font = fnt
```
