

# HeaderFooterSection.GetText()

Introduced in build 4.5.1

## Description

Returns the text that is contained in this section of the header or footer, including formatting codes

## Remarks

For information on the formatting codes used in headers and footers, see [Formatting Headers and Footers](#). If there is no content in this section of the header or footer, returns null.

### C#

```
public string GetText()
```

### vb.net

```
Public Function GetText() As String
```
