

ExcelTemplate.LicenseKey

Description

Sets or returns the 23-character license key that enables ExcelWriter for the current instance.

C#

```
public System.String LicenseKey{ get; set; }
```

vb.net

```
Public Property LicenseKey() As String
```

Remarks

This key does not persist once the code completes execution. If this property is set, ExcelWriter will use this key and ignore any keys in the registry.

Examples

C#

```
//--- Get LicenseKey
string key = xlt.LicenseKey;

//--- Set LicenseKey
ExcelTemplate xlt = new ExcelTemplate();
xlt.LicenseKey = "XXXXXX-XXXX-XXXX-XXXXXX";
xlt.Open("Template.xlsx");
```

vb.net

```
'--- Get LicenseKey
Dim key As String = xlt.LicenseKey

'--- Set LicenseKey
Dim xlt As New ExcelTemplate()
xlt.LicenseKey = "XXXXXX-XXXX-XXXX-XXXXXX"
xlt.Open("Template.xlsx")
```
