

PageSetup.GetFooter(HeaderFooterSection.Section)

Introduced in build 4.5.1

Description

Returns a section of the footer.

C#

```
public HeaderFooterSection GetFooter(HeaderFooterSection.Section section)
```

vb.net

```
Public Function GetFooter(ByVal section As HeaderFooterSection.Section) As  
HeaderFooterSection
```

Parameters

section

The section of the footer to return

Returns

A [HeaderFooterSection](#) object representing the specified section of the footer

Remarks

You can use a [HeaderFooterSection](#) object to manipulate a given section of the header or footer, such as the text or image that appears in that section. Note that the total length of the text in all sections of the footer may not exceed 255 characters.
