

SharePointIntegration.ImportData(Area, Microsoft.SharePoint.SPView, Microsoft.SharePoint.SPList)

Introduced in build 7.1.0.1855

Description

Imports data from a SharePoint View to the specified *Area*. The new data will overwrite values and formulas in the target worksheet cells, but existing formatting will be preserved.

C#

```
public static Area ImportData(this Area area, Microsoft.SharePoint.SPView view, Microsoft.SharePoint.SPList list)
```

vb.net

```
Public Shared Function ImportData(ByVal area As Area, ByVal view As Microsoft.SharePoint.SPView, ByVal list As Microsoft.SharePoint.SPList) As Area
```

Parameters

area

The current *Area* object which is calling *ImportData*

view

SharePoint View to use as a data source for the *Area*

list

SharePoint List associated with the SharePoint View

Returns

An *Area* object representing the set of cells populated with the imported values.

Remarks

This is an extension method for the *Area* object to be used for binding SharePoint data to spreadsheets from within SharePoint. To use this method, you must add a reference to *SoftArtisans.OfficeWriter.ExcelWriter.SharePointIntegration.dll*

Examples

C#

```
Area importedArea = a.ImportData(myView, myList);
```

vb.net

```
Dim importedArea As Area = a.ImportData(myView, myList)
```
