

Worksheet.CopyPaste

Overload	Description
<code>CopyPaste(Cell, Area)</code>	Copies an area of cells from another Worksheet to cells in this worksheet.
<code>CopyPaste(Cell, Area, CopyPasteProperties)</code>	Copies an area of cells from another Worksheet to cells in this worksheet.
<code>CopyPaste(Int32, Int32, Area)</code>	Copies an area of cells from another Worksheet to cells in this worksheet.
<code>CopyPaste(Int32, Int32, Area, CopyPasteProperties)</code>	Copies an area of cells from a Worksheet in either the same workbook or another workbook. You may specify the types of data copied (cell value, formulas, comments, formatting, etc.) using the CopyPasteProperties object. The <code>CopyPaste</code> method supports copying column width, comments, formulas, merged cells, row height, values, and cell and number formatting. The <code>CopyPaste</code> method does not currently support copying anything not listed above, including charts, images, or autofilters.
<code>CopyPaste(String, Area)</code>	Copies an area of cells from another Worksheet to cells in this worksheet.
<code>CopyPaste(String, Area, CopyPasteProperties)</code>	Copies an area of cells from another Worksheet to cells in this worksheet.
