

SharePointIntegration.ImportData(Element, Microsoft.SharePoint.SPView, Microsoft.SharePoint.SPList, DataImportProperties)

Introduced in build 4.1.0.1379

Description

Imports the data from a SharePoint View into a [Table](#) at the point of the current element in the document. Also accepts a SharePoint List to which the View belongs and a [DataImportProperties](#) object with the import options.

C#

```
public static Table ImportData(this Element element, Microsoft.SharePoint.SPView view, Microsoft.SharePoint.SPList list, DataImportProperties props)
```

vb.net

```
Public Shared Function ImportData(ByVal element As Element, ByVal view As Microsoft.SharePoint.SPView, ByVal list As Microsoft.SharePoint.SPList, ByVal props As DataImportProperties) As Table
```

Parameters

element

The current element which is calling ImportData

view

The SharePoint View to be used as a data source

list

SharePoint List to which the View belongs

props

Import properties for this data import, including max rows, max columns, column filter, etc.

Returns

The [Table](#) into which the data is being imported

Remarks

This is an extension method for the [Element](#) object to be used for binding SharePoint data to documents from within SharePoint. To use this method, you must add a reference to `SoftArtisans.OfficeWriter.WordWriter.SharePointIntegration.dll`

Examples

C#

```
Table tbl = e.ImportData(myView, myList, importProps);
```

vb.net

```
Dim tbl As Table = e.ImportData(myView, myList, importProps)
```
