

WordTemplate.Bookmarks

Description

Returns the names of all bookmarks in a WordWriter template.

C#

```
public System.String[] Bookmarks{ get; }
```

vb.net

```
Public ReadOnly Property Bookmarks() As String()
```

Remarks

Bookmarks are used to define repeat blocks. A repeat block is a fragment in the template document that contains merge fields and that will be repeated for each row in a data source.

Examples

C#

```
//--- Create the WordTemplate object.
WordTemplate oWW = new WordTemplate();

//--- Open a template using a string.
oWW.Open("C:\\template.doc");

//--- Get all the bookmark names in the document.
String[] allBookmarks = oWW.Bookmarks;
```

```
'--- Create the WordTemplate object.  
Dim oWW As New WordTemplate()  
  
'--- Open a template using a string.  
oWW.Open("C:\template.doc")  
  
'--- Get all the bookmark names in the document.  
Dim allBookmarks As String() = oWW.Bookmarks
```
