

SettingsLineAreaScatter.DropLine

Description

Returns a [ChartLine](#) object representing the drop lines of a line, area, or scatter series.

C#

```
public ChartLine DropLine{ get; }
```

vb.net

```
Public ReadOnly Property DropLine() As ChartLine
```

Remarks

Drop lines connect data points with the category axis. By default, drop lines are colored black, have a Narrow [weight](#) and a Solid [style](#). Note that scatter charts do not support drop lines, so while you can set the drop lines properties, they will not appear in the output of a scatter series.
