

# Area.ToString()

## Description

Returns a string representation of the [Area](#) object.

### C#

```
public virtual System.String ToString()
```

### vb.net

```
Public Overridable Function ToString() As String
```

## Returns

A string representation of the [Area](#) object.

## Examples

### C#

```
string areaDescription = area.ToString();
```

### vb.net

```
Dim areaDescription As String = area.ToString()
```
