

# SettingsPieDoughnut.ShowLeaderLines

## Description

Sets or returns whether lines from the slices to their data labels will be shown.

### C#

```
public boolean ShowLeaderLines{ get; set; }
```

### vb.net

```
Public Property ShowLeaderLines() As Boolean
```

## Remarks

This defaults to true when creating a new pie series.

The lines themselves can be customized using the [LeaderLines](#) property.

This property is linked for series in the same group. See [SettingsPieDoughnut](#) for more information on how linking works.

For doughnut series, setting this will have no effect and it will always return false.
