

# ColumnProperties.Style

## Description

Sets or returns a [Style](#) object that determines how cells in the column look, including number format, font, orientation, etc.

**C#**

```
public Style Style{ get; set; }
```

**vb.net**

```
Public Property Style() As Style
```

## Examples

**C#**

```
Style styl = colProps.Style;
```

**vb.net**

```
Dim styl As Style = colProps.Style
```
