

Cell.ToString()

Description

Returns a string representation of the [Cell](#) object.

C#

```
public virtual System.String ToString()
```

vb.net

```
Public Overridable Function ToString() As String
```

Returns

A string representation of the [Cell](#) object.

Examples

C#

```
string cellDescription = cell.ToString();
```

vb.net

```
Dim cellDescription As String = cell.ToString()
```
