

PowerPointTemplate.Save

Overload	Description
<code>Save(System.Web.HttpResponse, String, Bool)</code>	Streams the PowerPointTemplate to the client. This method allows you to specify a default client-side file name, and whether the file should be opened in the browser window or in Microsoft PowerPoint.
<code>Save(String)</code>	Saves the PowerPointTemplate to disk. The location is specified by the <code>filename</code> parameter.
<code>Save(System.IO.Stream)</code>	Saves the PowerPointTemplate to a stream passed in as the stream parameter.
<code>Save(System.Web.HttpResponse)</code>	Streams the PowerPointTemplate to the client.
