

Workbook.CreateNamedRange(Area(), String)

Description

Creates a [Range](#) of cells from an array of Areas. A Range is a collection of [Area](#) s; an Area area is a rectangular collection of cells.

C#

```
public Range CreateNamedRange(Area[] rangeAreas, System.String rangeName)
```

vb.net

```
Public Function CreateNamedRange(ByVal rangeAreas As Area(), ByVal rangeName As String) As Range
```

Parameters

rangeAreas

Array or Areas representing the range.

rangeName

The name to assign to the range.

Returns

A Range object representing the range of cells created.

Remarks

Note that if a range named `rangeName` already exists in the workbook, it will be overwritten with the new named range created by this method.

Examples

C#

```
Range rng = wb.CreateNamedRange(  
    new Area[]{  
        worksheet1.CreateArea(2, 4, 2, 5),  
        worksheet2.CreateArea(2, 4, 2, 5)},  
    "MyRange");
```

vb.net

```
Dim rng As Range = wb.CreateNamedRange( _  
    New Area(){ _  
        worksheet1.CreateArea(2, 4, 2, 5), _  
        worksheet2.CreateArea(2, 4, 2, 5)}, _  
    "MyRange")
```
