

Workbook.SavePdf(Boolean, String)

Introduced in build 10.0

Description

Saves a [Workbook](#) as a PDF file at a specified file path.

C#

```
public static void SavePdf(Boolean onlySelectedWorksheets, String filePath)
```

vb.net

```
Public Static Sub SavePdf(ByVal onlySelectedWorksheets As Boolean, ByVal filePath As String)
```

Parameters

onlySelectedWorksheets

If true, only selected worksheets will be saved to the PDF. If false, all visible worksheets in the workbook will be saved to the PDF.

filePath

A `string` representing the filepath you would like to save the PDF to.

Exceptions

System.Exception

If there is a problem creating, opening, or writing to the file specified, or reading from the Workbook object.

Remarks

The [Worksheet.PageSetup](#) property will be used to specify how each worksheet should be rendered to the PDF document. The individual PageSetup options are reflected in the final document. Each worksheet uses its own PageSetup property to determine how that worksheet should be rendered.

Examples

C#

```
ExcelApplication xla = new ExcelApplication();  
    Workbook WB= xla.Create(FileFormat.Xlsx);  
    WB.SavePdf(false, "Path/filename.pdf");
```

vb.net

```
Dim oExcelApp As New ExcelApplication()  
    Dim wb As Workbook = oExcelApp.Create(FileFormat.Xlsx)  
    wb.SavePdf(False, "Path/filename.pdf")
```
