

CategoryAxis.MinorUnit

Description

In conjunction with [MinorUnitValue](#), determines the [time interval](#) between minor tick marks for category axes with a [DisplayType](#) of TimeScale.

C#

```
public AxisTimeUnit MinorUnit{ get; set; }
```

vb.net

```
Public Property MinorUnit() As AxisTimeUnit
```

Remarks

This value specifies the units of measurement when determining how frequently there will be tick marks on a time-scaled category axis. For example, if MinorUnit is set to Day and [MinorUnitValue](#) is set to 2, then there will be 2 days between every minor tick mark.

The default value for newly created charts in ExcelWriter is Days.

This property has no effect for category axes with a [DisplayType](#) of Category.
