

Element.InsertImageAfter(String)

Description

Inserts and returns an [InlineImage](#) at the end of this Element. The image that will be inserted is specified by the fileName parameter.

C#

```
public virtual InlineImage InsertImageAfter(System.String fileName)
```

vb.net

```
Public Overridable Function InsertImageAfter(ByVal fileName As String) As InlineImage
```

Parameters

fileName

A String containing the filename of the image to insert.

Returns

An [InlineImage](#) object that represents the image that was inserted.

Exceptions

System.Exception

If the image file is not a valid format. See [InlineImage.Format](#) for a list of supported formats.

Examples

C#

```
InlineImage image = e.InsertImageAfter("C:\\sample.jpg");
```

vb.net

```
Dim image As InlineImage = e.InsertImageAfter("C:\\sample.jpg")
```
