

# PowerPointApplication.Create(PowerPointApplication.FileFormat)

## Description

Creates a new presentation containing 1 slide, in the specified file format. The slide is blank when the presentation is created, and standard font, style, and format settings are applied.

**C#**

```
public void Create(PowerPointApplication.FileFormat format)
```

**vb.net**

```
Public Sub Create(ByVal format As PowerPointApplication.FileFormat)
```

## Parameters

***format***

The file format to use for the presentation.

## Returns

A [Presentation](#) object representing the created presentation.

## Examples

**C#**

```
Presentation pres = pptApp.Create(PwoerPointApplication.FileFormat.Pptx);
```

**vb.net**

```
Dim pres As Presentation = pptApp.Create(PowerPointApplication.FileFormat.Pptx)
```
