

PowerPointTemplate.BindData(Object(), String(), String, PowerPointWriter.DataBindingProperties)

Description

Sets an array of objects as a template data source.

C#

```
public void BindData(Object[] columnValues, String[], columnNames, String
dataSourceName, PowerPointWriter.DataBindingProperties bindingProperties)
```

vb.net

```
Public Overridable Sub BindData(ByVal columnValues As Object[], ByVal columnNames As
String[], ByVal dataSourceName As String, ByVal bindingProperties As
DataBindingProperties
```

Parameters

columnValues

An array of objects to use as the data source.

columnNames

The names of the columns to get from the data source.

dataSourceName

The name of the data source.

bindingProperties

A DataBindingProperties object.

Examples

C#

```
string[] values = {"Hello World", "subtitle"};
string[] colNames = {"header", "subtitle"};
DataBindingProperties DataProps = pptt.CreateDataBindingProperties();

ppt.BindData(values, colNames, "DataSource1", DataProps);
```

vb.net

```
Dim values = New String() {"Hello World", "subtitle"}  
Dim colNames = New String() {"header", "subtitle"}  
Dim DataProps As DataBindingProperties = pptt.CreateDataBindingProperties();  
  
pptt.BindData(values, colNames, "DataSource1", DataProps);
```
