

PowerPointApplication.Save(PowerPointWriter.Presentation, System.IO.Stream)

Description

Saves a specified [Presentation](#) an OOXML format .pptx file.

C#

```
public virtual void Save(Presentation presentation, System.IO.Stream stream)
```

vb.net

```
Public Overridable Sub Save(ByVal presentation As Presentation, ByVal stream As System.IO.Stream)
```

Parameters

presentation

A Presentation object representing the presentation to save.

stream

The output stream to write to. This stream must be open and writable. PowerPointWriter will not close this stream; the calling program is responsible for closing the stream and releasing the resource.

Examples

C#

```
PowerPointApplication pptApp = new PowerPointApplication();  
Presentation pres = pptApp.Create(PowerPointApplication.FileFormat.Pptx);  
FileStream fstream = new FileStream(@"C:\temp\outfile.pptx",  
    FileMode.Create);  
PowerPointApp.Save(pres, fstream);
```

vb.net

```
Dim pptApp As New PowerPointApplication()  
Dim pres As Presentation =  
pptApp.Create(PowerPointApplication.FileFormat.Pptx)  
Dim fstream As New FileStream("C:\temp\outfile.pptx", _  
    FileMode.Create)  
pptApp.Save(pres, fstream)
```
