

NamedObject.BuiltInName

Description

The [BuiltInName](#) class contains all built-in object names.

C#

```
public sealed class BuiltInName : TypesafeEnum
```

vb.net

```
Public NotInheritable Class BuiltInName  
    Inherits TypesafeEnum
```

Remarks

Built-in names denote named objects that are created and managed by Excel, the names for which should not be used for named objects created by users. For example, a worksheet with print titles will automatically have a named object "Print_Titles" created.

Note that in XLSX workbooks Excel prefixes all the built-in names with "_xlnm.". You can access this prefix through `NamedObject.BuiltInName.XlsxPrefix`.

Values

Name	Description
Auto_Activate	Auto_Activate
Auto_Close	Auto_Close
Auto_Deactivate	Auto_Deactivate
Auto_Open	Auto_Open
