

Area.GetColumnWidth(Int32)

Description

Returns the width - in points (1/72 of an inch) - of the specified column. When converted to character widths, this must be a value that is between 0 - 255.

C#

```
public double GetColumnWidth(int columnIndex)
```

vb.net

```
Public Function GetColumnWidth(ByVal columnIndex As Integer) As Double
```

Parameters

columnIndex

The column's 0-based index, relative to the first column in the Area.

Returns

The width of the column, in points.

Examples

C#

```
double colWidth = a.GetColumnWidth(0);
```

vb.net

```
Dim colWidth As Double = a.GetColumnWidth(0)
```
