

Area.ToString()

Description

Returns a string representation of the [Area](#) object.

C#

```
public virtual System.String ToString()
```

vb.net

```
Public Overridable Function ToString() As String
```

Returns

A string representation of the Area object.

Examples

C#

```
string areaDescription = area.ToString();
```

vb.net

```
Dim areaDescription As String = area.ToString()
```
