

Worksheet.ImportData(System.Data.DataTable, Cell)

Description

Imports data from an ADO.NET [DataTable](#) to cells in the worksheet. The new data will overwrite values and formulas in the target worksheet cells, but existing formatting will be preserved.

C#

```
public Area ImportData(System.Data.DataTable data, Cell cell)
```

vb.net

```
Public Function ImportData(ByVal data As System.Data.DataTable, ByVal cell As Cell) As Area
```

Parameters

data

The DataTable to import.

startCell

The cell at which to start entering the imported values.

Returns

An [Area](#) object representing the set of cells populated with the imported values.

Examples

C#

```
Area importedArea = ws.ImportData(dataDT, cel);
```

vb.net

```
Dim importedArea As Area = ws.ImportData(dataDT, cel)
```
