Worksheet.CreateAreaOfColumns(Int32, Int32)

> ⚠ **Obsolete**
> This method has been deprecated, as it is not the most efficient way to edit Column properties. Instead, use the Worksheet.GetColumn Properties(Int32) method to return the ColumnProperties object of the desired column.

Description

Returns an Area object representing all the cells in a specified group of columns. An area is a rectangular collection of cells.

C#

```csharp
public Area CreateAreaOfColumns(int firstCol, int numCols)
```

vb.net

```vbnet
Public Function CreateAreaOfColumns(ByVal firstCol As Integer, ByVal numCols As Integer) As Area
```

Parameters

firstCol

The 0-based index of the first column.

numCols

The number of columns to include.

Returns

An `Area` object representing the set of cells in the specified columns.

Examples

C#

```csharp
Area a = ws.CreateAreaOfColumns(0, 25);
```

vb.net

```vbnet
Dim a As Area = ws.CreateAreaOfColumns(0, 25)
```
