

NamedObject.Scope

Description

A [Scope](#) value specifies the scope of the object that a [NamedObject](#) refers to.

C#

```
public sealed class Scope : TypesafeEnum
```

vb.net

```
Public NotInheritable Class Scope  
    Inherits TypesafeEnum
```

Remarks

Named objects of type `ExternalReference` are always scoped `External`. Other named objects are scoped either `Worksheet` or `Workbook`, depending on whether they can be accessed via `Workbook.GetNamedRange` or `Worksheet.GetNamedRange`.

Values

Name	Description
External	External
Workbook	Workbook
Worksheet	Worksheet
