

WordChangeTracking

Description

This class is used to get and set Word change tracking settings for a document.

C#

```
<p> public sealed class WordChangeTracking</p>
```

vb.net

```
<p>Public NotInheritable Class WordChangeTracking</p>
```

Remarks

You cannot create a new [WordChangeTracking](#) object. You must use [Document.ChangeTracking](#) to retrieve WordChangeTracking properties for a document.

The following sample gets the WordChangeTracking object of a document so you can start working with its properties.

Examples

C#

```
WordApplication app = new WordApplication();  
Document doc = app.Open(@"C:\sample.doc");  
WordChangeTracking changeTracking = doc.ChangeTracking;
```

vb.net

```
Dim app As New WordApplication()  
Dim doc As Document = app.Open("C:\sample.doc")  
Dim changeTracking As WordChangeTracking = doc.ChangeTracking
```

Properties

Name	Description
------	-------------

DisplayRevisions	Sets or returns a <code>boolean</code> that represents whether or not Word will display revisions for this document.
LockRevisionMarkingState	Sets or returns a <code>boolean</code> that represents whether or not the current revision tracking state is locked.
