

NumberFormat.CreateFraction(Int32)

Description

Creates a string for displaying fractions.

C#

```
public System.String CreateFraction(int numDigits)
```

vb.net

```
Public Function CreateFraction(ByVal numDigits As Integer) As String
```

Parameters

numDigits

The number of digits to display.

Returns

A fraction format string.

Examples

C#

```
//--- Create a style.  
Style styl = wb.CreateStyle();  
  
//--- Create the fraction format "# ???/???".  
styl.NumberFormat = wb.NumberFormat.CreateFraction(3);
```

vb.net

```
'--- Create a style.  
Dim styl As Style = wb.CreateStyle()  
  
'--- Create the fraction format "# ???/???"  
styl.NumberFormat = wb.NumberFormat.CreateFraction(3)
```
