

Area.ImportData(System.Data.DataView)

Description

Imports data from an ADO.NET [DataView](#) to the specified [Area](#). The new data will overwrite values and formulas in the target worksheet cells, but existing formatting will be preserved.

C#

```
public Area ImportData(System.Data.DataView data)
```

vb.net

```
Public Function ImportData(ByVal data As System.Data.DataView) As Area
```

Parameters

data

The [DataView](#) to import.

Returns

An [Area](#) object representing the set of cells populated with the imported values.

Examples

C#

```
Area importedArea = a.ImportData(oDataView);
```

vb.net

```
Dim importedArea As Area = a.ImportData(oDataView)
```
