

Area.ImportData(System.Data.DataTable, DataImportProperties)

Description

Imports data from an ADO.NET [DataTable](#) to the specified [Area](#). The new data will overwrite values and formulas in the target worksheet cells, but existing formatting will be preserved.

C#

```
public Area ImportData(System.Data.DataTable data, DataImportProperties props)
```

vb.net

```
Public Function ImportData(ByVal data As System.Data.DataTable, ByVal props As DataImportProperties) As Area
```

Parameters

data

The DataTable to import.

props

A [DataImportProperties](#) object that contains a set of properties that will determine the behavior of the data import.

Returns

An Area object representing the set of cells populated with the imported values.

Examples

C#

```
DataImportProperties importProps = wb.CreateDataImportProperties();  
importProps.Truncate = true;  
Area importedArea = a.ImportData(dt, importProps);
```

vb.net

```
Dim importProps As DataImportProperties = wb.CreateDataImportProperties()  
importProps.Truncate = True  
Area importedArea = a.ImportData(dt, importProps)
```
