

List.GetLevel(Int32)

Description

Returns a [ListLevel](#) object representing a particular level for this lst. The levels start at 0 and end at 8 (9 levels total).

C#

```
public ListLevel GetLevel(int level)
```

vb.net

```
Public Function GetLevel(ByVal level As Integer) As ListLevel
```

Parameters

level

An `int` representing the level to get the list level at.

Returns

A `ListLevel` object representing a particular level for this lst.

Examples

C#

```
ListLevel level = lst.GetLevel(0);
```

vb.net

```
Dim level As ListLevel = lst.GetLevel(0)
```
