

DocumentProperties.GetProperty(DocumentProperties.BuiltInProperty)

Description

Returns an `Object` that represents the value of the property specified.

C#

```
public System.Object GetProperty(BuiltInProperty property)
```

vb.net

```
Public Function GetProperty(ByVal [property] As BuiltInProperty) As Object
```

Parameters

property

A [BuiltInProperty](#) object that represents the built-in property to set.

Returns

An `Object` that represents the value of the property specified.

Remarks

MS Word equivalent: File menu > Properties > Custom tab > Properties:

Examples

C#

```
//--- Return "Author" Property
string priority =

(string)docProps.GetProperty(DocumentProperties.BuiltInProperty.Author);
```

vb.net

```
'--- Return "Author" Property  
Dim priority As String = _  
    docProps.GetProperty(DocumentProperties.BuiltInProperty.Author)
```
