ShowValueAs.BaseField
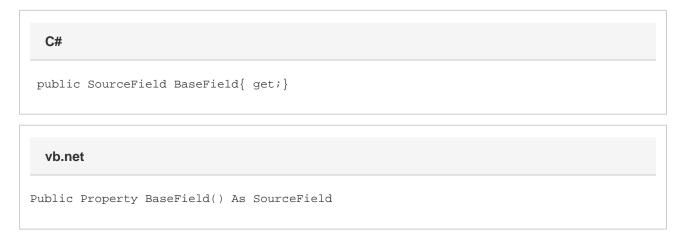

Description

Returns the base field used in calculating the values for a data field that are shown in the PivotTable.

C#

```
public SourceField BaseField{ get;}
```

---

vb.net

```
Public Property BaseField() As SourceField
```

Remarks

Value fields return null. You can check if a Pivot Table field is a value field with the `IsValuesLabel` Property

When calling `SetShowValueAs()`, certain `ShowValueAsTypes` use a source field as a base field and an index for one of the values in the data source column associated with the source field.
